Subject: Give GHG Emissions Dividends to Californians

Dear EAAC,

When allocating GHG permits under AB32, I ask you to consider the option of giving dividends to Californians.

California can lead the world with a carbon cap based on democratic principles by returning the majority of emissions value directly back to the public. Recycling the revenues with a dividend or share will help the people of California pay for increased energy bills, stimulate the economy, and reduce our state's carbon footprint.

What happens in California can have a positive impact on Congress and on the international climate talks in Copenhagen.

Thank you,
Elaine Booth
